Create a URL-based test

BasicsTest planParametersLoadMonitoringTest criteria

Requests

Enter the request details that you want to test. You can add up to 15 requests.

+ Add request

Name

Add requests to the test.

Input data files

Upload the input data files in CSV format with ',' as the delimiter. The separated variable names below instead of using a header row. You can use the following syntax: \${ColumnName}.

Choose files

Select a file

PreviousNextReview + create

Add request

Enter the request details like URL, method, headers and body or add a cURL command. You can add up to 20 headers. Extract data into response variables to use in any subsequent requests as \${VariableName}. [Learn more](#)

Request format *
☒ Add input in UI
☐ Add cURL command

Request name *
Request1

URL *
Enter the complete HTTP URL.
E.g. https://azure.microsoft.com

HTTP method *
GET

Create a URL-based test

BasicsTest planParametersLoadMonitoringTest criteriaReview + create

Validation passed.

Basics

Test tool	JMeter
Test name	Test_4/22/2026_12:13:53 PM
Test description	api testing
Debug mode	Disabled

Test plan

Test method	URL
Requests	Get tasks,Create tasks,Get users
Input data files	

Load

Engine instances	1
------------------	---

Next steps

Run test after creation
☒

Test run description
Enter purpose of test run

Test run options
☐ Debug
Runs with 1 engine for up to 10 minutes, providing debug logs and data for failed requests. [Learn more](#)
☒ As configured
Runs with the number of engines and duration as configured in the test.
